

Kaohandt Test Document

Test Author

February 22, 2026

This is a minimal test document using the kaohandt class from the kaobook project. Its purpose is to verify that the class and all required style files are correctly found by XeLaTeX.

1	Introduction	1
2	Sample Content	1
2.1	A Subsection	2
A	Appendix	2

1. Introduction

This document tests the basic layout of the kaohandt class.¹

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

¹: This is a margin note (sidenote) to verify that the wide-margin layout works correctly under XeLaTeX.

2. Sample Content

Here is a second section with more filler text to exercise the layout.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written

in of the original language. There is no need for special content, but the length of words should match the language.

2.1. A Subsection

The `kaohandt` class inherits from `scrartcl` (KOMA-Script) and loads the shared `kao` style. Key features include wide margins for annotations, a customised title block, and support for sidenotes.

¹
